EXECUTIVE SUMMARY

Senior Software Engineer and Scrum Master with 10+ years architecting enterprise CRM platforms and modern microservices for global financial institutions. Pega Certified System Architect (CSA), Pega Certified Senior System Architect (CSSA), and Pega Lead System Architect (LSA) in progress, with comprehensive expertise across Pega 7-25, recognized as subject matter expert for CRM development tools within Murex's engineering organization.

Experienced architect who takes ownership of end-to-end system design, from database schema and security models to integration patterns and production deployment. Serve as Scrum Master with proven track record of team transformation, successfully mentoring junior engineers and leading teams through complex projects from initial design to production delivery.

Accomplished iOS Tech Lead with 11+ years shipping consumer and enterprise mobile products, including published applications with thousands of App Store reviews. Skilled at leading cross-functional teams (iOS, Android, backend) through complete product lifecycles, from technical architecture and API design to App Store release and ongoing maintenance.

KEY ACHIEVEMENTS

- Played major development role in building Murex CS CRM from scratch on Pega platform through 2-year development cycle, contributing to successful production go-live for multiple enterprise clients across core modules including Projects, Cases, Solutions, and User Administration
- Optimized CI/CD pipeline performance by 92% (3 hours to under 15 minutes) through parallelization strategy, enabling significantly faster deployment cycles while maintaining high automated test coverage
- Recognized by leadership for exceptional Scrum Master performance, elevating team velocity and collaboration through servant leadership, systematic impediment removal, and fostering self-organizing team culture with consistent sprint delivery and measurable gains in delivery predictability
- Played major role in developing custom Confluence plugins to enhance technical documentation authoring at Murex, implementing version-aligned workflows synchronized with product releases, significantly improving documentation quality and release management efficiency
- Published 10+ iOS applications over 11 years including Links.vip (subscription-based link-in-bio tool), Qibla Pro (5,000+ reviews with 4.8★ rating), and led technical architecture for WhatsDoc telehealth platform (DIAHCO Group), demonstrating consistent ability to deliver successful consumer and enterprise medical applications
- Architected microservices platform including Spring Cloud Gateway, Python FastAPI toolkit service with Celery workers, and admin services supporting multiple enterprise applications with automated deployment pipelines

CORE COMPETENCIES

Pega Platform Expertise: Pega CRM (v7-25) • CSA & CSSA Certified • LSA in Progress • Pega Sales CRM • Pega CS CRM • Case Management • Decisioning • ABAC/RBAC Security • Pega Mobile

Architecture & Microservices: System Design • Spring Boot • Spring Cloud Gateway • Python FastAPI • Celery • RabbitMQ • PostgreSQL • Redis • Docker

iOS Development: Swift • SwiftUI • Async/Await • Combine • Live Activities • Widgets • StoreKit 2 • Firebase • 11+ years experience

Agile & Team Leadership: Scrum Master • SAFe Methodology (8+ years) • PI Planning • Team Transformation • Mentorship • Liberating Structures

DevOps & Quality: GitHub • Stash • Pipeline Optimization • Playwright • High Test Coverage • SonarQube • Black Duck

PROFESSIONAL EXPERIENCE

Senior Software Engineer & Scrum Master

Senior Software Engineer and Scrum Master for enterprise CRM platforms serving global financial institutions. Take ownership of system architecture, from database design and security models to microservices integration and production deployment. Recognized as subject matter expert with comprehensive expertise across all CRM development tools within the organization.

Technical Architecture & Leadership

- Own end-to-end architecture for Pega CRM platforms (Murex Sales CRM, Murex CS CRM) and microservices landscape including Spring Cloud Gateway, Admin Service, and Client Management Service, designing integration patterns, security models (Azure AD, SAML 2.0, OAuth 2.0) and data flows
- Provide core development and architectural oversight for Pega Sales CRM and Pega CS CRM platforms, delivering features across case management, decisioning, user administration, and client engagement workflows, while performing seamless version upgrades across Pega 8 through 25
- Architect and develop React-based User Administration platform serving multiple client organizations with multi-tenant access control across Pega, Jira, Confluence and internal tools, and build Pega CS Outlook Add-in (React) for seamless email integration with CRM workflows
- Provide technical mentorship to junior engineers and interns, representing team in cross-functional discussions, and coordinating technical decisions across CRM, microservices and user administration platforms

Scrum Master & Agile Leadership

- Accelerate team velocity and delivery predictability for team of 8 engineers through servant leadership, systematic impediment removal, and data-driven sprint planning, achieving measurable improvements in sprint completion rates and team engagement recognized by leadership for cultural transformation
- Facilitate all Scrum ceremonies including sprint planning, daily standups, sprint reviews, and retrospectives using Liberating Structures techniques, fostering psychological safety and enabling self-organizing team culture with consistent delivery
- Manage stakeholder expectations through transparent burndown charts and sprint metrics while coordinating cross-functional dependencies, coaching team members on agile principles and empowering team autonomy in technical decisions

Engineering Excellence & DevOps

- Revolutionized CI/CD pipeline performance through comprehensive parallelization strategy including pipeline stages, Playwright end-to-end tests, and unit tests, reducing deployment time by 92% (from approximately 3 hours to under 15 minutes) while maintaining 95%+ test coverage in microservices and 70%+ in Pega rules, enabling significantly faster deployment cycles and faster feedback loops for developers
- Established comprehensive automated testing framework using Playwright achieving 100% coverage of main business objects in Pega Sales Automation, eliminating regression bugs and enabling confident continuous deployment
- Played major role in developing custom Confluence plugins (Java + JavaScript) to enhance technical documentation authoring and release management at Murex, implementing version-aligned document workflows synchronized with product releases (e.g., v3.1.62, v3.1.63), significantly improving documentation quality and developer productivity

Platform Development & Integration

- Architected Python FastAPI toolkit service with Celery workers for async PDF generation, serving multiple enterprise applications with multi-tenant template management, RabbitMQ queuing, and robust error handling
- Played key role in company-wide Mule 3 to Mule 4 migration across multiple integration flows, executing DataWeave 1.0→2.0 transformations and security enhancements (Basic Auth to token-based authentication)

Software Engineer (Internal)

Murex Lebanon | 2018 – 2020

- Promoted from external contractor to internal employee as part of carefully selected group of high-performing developers based on strong technical contributions and project delivery
- Expanded scope beyond core Pega CRM development to include React-based User Administration platform serving multiple client organizations, enabling multi-tenant access control across Pega, Jira, Confluence and internal tools

- Supported CRM integrations via Mule ESB connecting PeopleSoft, Marketo, Data Warehouse and internal systems, ensuring reliable data flow for mission-critical business processes

Software Engineer (External Consultant)

Murex Lebanon | 2016 – 2018

- Played major development role in building Murex CS CRM from scratch on Pega platform, contributing to core objects including Projects, Cases, Solutions, Customer Rights File, Product List, Notes (CLOB/attachments) and Module Map, leading to successful 2018 production go-live serving multiple enterprise clients
- Executed technically complex PeopleSoft-to-Pega enterprise migration, building extraction, transformation and loading logic for complex object hierarchies while preserving referential integrity and business process states across Projects, Cases, Solutions and Notes with CLOB data
- Implemented core case management workflows, data structures and flow logic, contributing to pilot launch and production deployment of Murex CS CRM platform

iOS Developer

Intalio GS | 2015 – 2016 | Beirut, Lebanon

- Developed high-profile enterprise iPad applications for Qatari government institutions including Qatar MMUP (Ministry of Municipality and Urban Planning), Qatar Ministry of Foreign Affairs, and Prime Minister's Office reporting application, using Objective-C and building from scratch while enhancing existing apps
- Promoted from 3-month intern to full-time iOS developer after winning Intel Ideathon at Berytech 2014, demonstrating strong technical capabilities and initiative from career inception

INDEPENDENT iOS DEVELOPMENT & CONSULTING

iOS Tech Lead & Architect

Self-Employed | 2015 – Present | Remote

Lead technical architecture and delivery of iOS applications for enterprise clients and consumer products over 11+ years in parallel with full-time employment. Serve as technical lead for cross-functional teams (iOS, Android, backend), defining system architecture, APIs, and shepherding applications from concept through App Store release to ongoing maintenance.

Client Engagements & Technical Leadership

- WhatsDoc (DIAHCO Group) — Served as overall technical and project lead for telehealth application, defining APIs and data flows, coordinating delivery across iOS, Android and backend teams, and establishing technical architecture for HIPAA-compliant patient-doctor communication platform
- iScan Menu — Led overall architecture for digital QR menu maker serving restaurants and food businesses, coordinated backend and Android development, implemented Firebase infrastructure with security rules, and launched subscription-based business model (\$6.99/month)
- Ilhaam Qibla — Shipped iOS development for client prayer application focusing on accurate Qibla direction and prayer time calculations, aligning with backend and Android collaborators, and delivered ad-free experience with gentle reminder system
- Qbites — Delivered iOS development for startup focused on infant and toddler nutrition with dynamic meal planning and dietary assessment, working with backend and Android team members through external engagement

Published Products & Consumer Apps

- Links.vip — Link-in-bio tool enabling creators and businesses to build brandable pages with customizable design and multi-language support. Subscription model (\$2.99/month, \$19.99/year) serving Instagram and TikTok creators with positive user feedback praising speed and design
- Qibla Pro — Prayer direction application with over 5,000 reviews and 4.8★ average rating, focused on clean, ad-free experience. Praised for modern UI, exceptional ease of use, and accurate compass technology
- Portfolio of 10+ additional iOS applications including Muslim World Islamic App, SwiftCard QR Business Card, and Counter Pro, demonstrating consistent ability to conceptualize, develop, and launch successful App Store products

EDUCATION

Bachelor of Science in Computer Science | Lebanese American University (LAU) | 2015

CERTIFICATIONS & AWARDS

Pega Certified System Architect (CSA) | [Verify Certification](#)

Pega Certified Senior System Architect (CSSA) | [Verify Certification](#)

Pega Lead System Architect (LSA) — In Progress

Mindbreeze Expert Certification (2020)

Intel Ideathon Winner — Berytech 2014 | [View Award](#)

SAFe Training: SAFe Fundamentals, Scrum Master Principles, Liberating Structures Facilitation

TECHNICAL EXPERTISE

Pega Platform: Activities and data transforms • Flows and flow actions • Agents, connectors and services • Data pages and reports • Case types and stages • Decision rules • Pega Mobile • Security (ABAC/RBAC) • Ruleset management • Performance tools (Tracer, PAL) • Versions 7-25

Backend & Microservices: Java Spring Boot • Spring Cloud Gateway • Python FastAPI and Celery • Mule 3/4 with DataWeave • REST and SOAP APIs • RabbitMQ message queues • PostgreSQL, Redis • WeasyPrint PDF generation

Frontend: React and Next.js • JavaScript and TypeScript • HTML5 and CSS3 • Tailwind CSS • Redux state management • Custom Atlassian Confluence plugins

iOS Development: Objective-C and Swift (11+ years) • SwiftUI and UIKit • Async/await and Combine • Live Activities and widgets • Push notifications • StoreKit and StoreKit 2 • Firebase (Auth, Firestore, Cloud Functions, FCM, Analytics, Crashlytics) • App Store deployment

Cloud & Infrastructure: Azure AD and Azure Static Web Apps • AWS S3, EFS and RDS • Docker containerization and multi-stage images

DevOps & CI/CD: GitHub Actions, Stash and Jenkins • Pipeline parallelization (stages, Playwright tests, unit tests) • SonarQube, Black Duck, GitHub Advanced Security • Container scanning • High test coverage culture (95%+ microservices, 70%+ Pega)

Testing: Playwright end-to-end testing (100% coverage) • JUnit, PyTest • Pega unit testing • Test-driven development practices

Tools & Platforms: Atlassian suite (Jira, Confluence, Bitbucket) • Custom Confluence plugins • Mindbreeze enterprise search • Marketo integrations • Miro and SAFe planning tools
